LTM

Enterprise Testing Services

Enterprise Cloud Applications (ECA) Assurance

Outcreating Enterprise Workflows and Integrations
with AI-Powered Assurance

Assuring ECA Assurance Beyond Quality

Enterprise applications increasingly rely on workflow platforms, low-code development, APIs, integrations, and intelligent automation to run mission-critical operations. As these ecosystems expand, testing individual applications is no longer enough. Organizations must validate the end-to-end business processes that connect them.

Enterprise Testing Services helps organizations Outcreate fragmented quality practices through AI-powered Enterprise Cloud Applications (ECA) Assurance. By combining platform expertise, intelligent automation, and continuous validation, LTM brings together human insights and intelligent systems to assure business workflows, accelerate cloud transformation, and improve release confidence across interconnected enterprise ecosystems.

Why ECA Quality Falls Short

As enterprise cloud ecosystems grow, assuring quality across platforms and business processes becomes increasingly complex.

- Fragmented testing across ServiceNow, PEGA, and other enterprise applications
- Frequent platform releases that increase regression risk and impact business continuity
- Integration failures across APIs & Microservices, MuleSoft, Boomi, Workato, Kafka, EDI, middleware, and third-party ecosystems
- Complex business process validation spanning customer onboarding, servicing, and mission-critical workflows
- Data quality and migration challenges that affect reporting, operational efficiency, and regulatory compliance
- Limited visibility into release readiness, business process health, automation coverage, and production risk

The result is delayed transformations, unstable releases, disrupted business operations, increased support costs, lower user adoption, and reduced stakeholder confidence.

Our Solution

ECA Assurance combines domain expertise, AI- low-code or no-code (LCNC), and AI-IQA to deliver continuous assurance across enterprise workflows, low-code platforms, and integration ecosystems. Powered by Gen AI-enabled automation, self-healing testing, predictive quality intelligence, and platform-native accelerators, the solution helps organizations reduce release risk, strengthen operational resilience, and accelerate cloud transformation with confidence.

What ECA Assurance Delivers

Coverage

ServiceNow Assurance	Validates NOW Platform modules, workflows, business rules, and enterprise integrations
PEGA Assurance	Confirms end-to-end business process validation across the PEGA ecosystem
Applications Integration and Orchestration (AIO) Assurance	Assures event-driven, publish-subscribe, producer-consumer, microservices, API-connected, and orchestration-based architectures
Disruptive SaaS Assurance	Validates mission-critical enterprise processes including lead-to-revenue, supply chain, source-to-pay, and connected planning
Low-Code or No-Code Assurance	Assures low-code applications and workflow automation across enterprise platforms including ServiceNow ATF, AI-CRM, AI-IQA, AI-LCNC platforms.

AI-Enabled ECA Assurance Ecosystem

The ECA Assurance ecosystem brings together automation, intelligence, governance, and quality insights within a unified framework.

Supported across

- Workflow platforms including ServiceNow, PEGA, low-code or no-code applications (LCNC)
- Integration, APIs & Microservices including MuleSoft, Boomi, Kafka, APIs, and Middleware
- Business process journeys across customer, employee, partner, and supply chain operations
- AI and intelligent automation including virtual agents, decision engines, and agentic workflows

Outcreate ECA Assurance at Scale

The following outcomes help organizations modernize enterprise cloud application quality while improving release confidence and operational resilience:

- Up to 2x faster releases through AI-enabled platforms, reusable assets, and CI/CD integration
- Higher release confidence through early detection of integration and workflow defects
- Up to 35% lower cost of quality through reusable automation and self-healing capabilities

Why LTM

As a Business Creativity partner, LTM combines enterprise platform expertise, AI-powered accelerators, and Enterprise Quality Assurance to help organizations assure business outcomes with confidence. By bringing human insights and intelligent systems together, LTM enables continuous quality across complex enterprise workflows, integrations, and cloud transformations.

Stories of Outcreation

- **PEGA Modernization:** Achieved a 95% reduction in regression test execution time through automated end-to-end testing
- **Enterprise Workflow Transformation:** Delivered 50% faster execution cycles with more than 85% regression automation coverage through platform-led Enterprise Quality Assurance
- **Integration Assurance at Scale:** Reduced cross-platform disruption risk through API, event, and orchestration validation across enterprise ecosystems

Assure Every Enterprise Workflow with Confidence
