LTI Mindtree's Cost-Effective Solutions for Efficient Telecom Inventory Management

Introduction

Telecom enterprises face multiple challenges in effectively managing the installation of their company-owned inventory at customer locations, including converting installed items into assets and tracking inventory held by engineers. The expenses associated with employing Oracle service management can be excessively high for small and medium-scale industries. However, available solutions can assist telecom operators in overcoming these challenges and enhancing their inventory management processes. By implementing appropriate tools and strategies, telecom operators can efficiently manage the installation of their company-owned inventory at customer locations, leading to improved efficiency and profitability.

Business Problem

- Telecom operators lack real-time visibility of their inventory items, making it hard to plan and optimize inventory levels and replenishment.
- They may face problems of overstocking or understocking inventory items, resulting in waste, obsolescence, or stockouts. They may also incur higher inventory holding, transportation, handling, and maintenance costs, reducing their profitability and competitiveness.
- They also may be unable to meet their customers' expectations and requirements who demand faster, cheaper, and better telecom services. The engineers may face difficulties finding the right inventory items when needed, delaying or affecting the quality of their service delivery to the customers.
- Telecom operators do not have timely and accurate information about customer installation projects' status, quality, and completion, making it hard to monitor and control their performance and efficiency.
- Their engineers may face difficulties reporting and documenting their customer installation activities, affecting their productivity and accountability.
- The customers may not have clear and consistent communication with the telecom operators or engineers about their installation projects' status, expectations, and feedback, affecting their satisfaction and loyalty.

Our Solution

- LTIMindtree offers a solution that leverages Oracle SaaS ERP to manage the installation of company-owned inventory at customer locations effectively.
- It utilizes specially designed tools and configurations, incorporating Oracle ERP modules like Inventory Management with minimal integration requirements.
- By adopting our solution, telecom operators can enhance their inventory management processes and overcome the challenges associated with tracking inventory held by engineers and converting installed items into assets.
- This solution provides a seamless and user-friendly experience for inventory management, enabling telecom operators to track and manage their company-owned inventory at customer locations effectively.
- With improved efficiency and accuracy in inventory management, telecom operators can reduce costs and enhance overall profitability.

Why LTIMindtree
