Enterprise Testing Services

AI-Powered Specialized Testing for
Mission Critical Enterprise Platforms

When Enterprise Change Moves Faster Than Quality

The most ambitious companies in the world are rebuilding how they operate, from the inside out. Enterprise applications sit at the center of that effort, connecting finance, supply chains, engagement, workforce management, and critical integrations. As organizations accelerate ERP, CRM, cloud, data, and digital transformation programs, the risk associated with every release, migration, upgrade, and integration continues to grow.

For CIOs, digital transformation leaders, platform owners, enterprise architects, and risk and compliance teams, quality can no longer be treated as a final checkpoint. The pace of change demands something more fundamental. Intelligence, automation, and continuous assurance need to be embedded across the entire delivery lifecycle. That is what it means to Outcreate reactive testing.

Why Traditional Testing Falls Short

Modern platform ecosystems are becoming increasingly complex, yet testing maturity often struggles to keep pace.

Common challenges include:

Testing that validates code, not business outcomes

Focus on modules rather than end-to-end business journeys

Large-scale transformations with minimal assurance coverage

Manual regression testing that slows every release velocity

Dashboards that report test status rather than business risk

Rising compliance demands without corresponding testing maturity

The result is delayed go-lives, broken trust and lost business.

Our Solution

LTM Enterprise Testing Services delivers AI-augmented, platform-centric quality engineering designed to assure business outcomes, not just platform functionality.

As a comprehensive Enterprise Application Testing partner with AI-driven end-to-end testing, LTM helps organizations validate change with a holistic picture across business-critical platforms and interconnected ecosystems.

Powered by the LTM Enterprise Assurance Platform, the solution embeds AI-driven quality across the software testing life cycle for transformations, migrations, rollouts, upgrades, and continuous release programs. By combining specialized testing services, deep platform expertise, proprietary IP, and AI/Gen AI-powered accelerators, Enterprise Testing Services helps organizations de-risk transformation programs, accelerate releases, and establish continuous quality across enterprise ecosystems.

What Enterprise Testing Services Delivers

End to End Business Assurance

Validate business processes, integrations, data, performance, security, and user experience holistically rather than in silos.

Transformation & Migration Assurance

De-risk SAP S/4HANA, Oracle Cloud, Salesforce, ServiceNow, Dynamics 365, PEGA, and digital transformation programs through business scenario-driven testing.

AI Driven Continuous Testing

Enable predictive regression, self healing automation, and intelligent test orchestration for faster, safer releases.

Cross Platform Integration Validation

Validate end to end workflows across APIs, middleware, and integration ecosystems including MuleSoft and Boomi.

Built in Governance, Risk & Compliance

Automate validation for security, regulatory controls, accessibility requirements, and data integrity.

Real Time Quality & Risk Intelligence

Gain a single view of release readiness, defect trends, business risk areas, and platform health.

Specialized Assurance Capabilities

Our specialized testing services are aligned to evolving enterprise priorities and platform modernization initiatives.

Interactive & Mobility Assurance:

Omnichannel experiences across web, mobile, commerce, CMS, accessibility (WCAG/EAA), visual regression, user journeys, marketing, and analytics.

Enterprise Cloud Apps Assurance:

Workflow, low-code, SaaS, API, integration, and release governance across platforms including ServiceNow and PEGA.

Enterprise Data Intelligence & Assurance:

Data migrations, transformations, pipeline orchestration, analytics, and BI ecosystems.

Enterprise TDM Assurance:

Secure and compliant test data through PII identification, data masking, synthetic data generation, governance, and self-service enablement.

Salesforce Transformation Assurance:

Customer 360, Industry Clouds, metadata automation, release readiness, and transformation programs.

MS Dynamics transformation Assurance:

D365 Finance & Operations, CRM, Power Platform, upgrade programs, and Copilot initiatives.

Oracle EBS & Cloud Transformation Assurance:

EBS modernization, Cloud ERP, HCM, SCM, migration programs, and finance and supply chain processes.

SAP Business Assurance:

End-to-end quality across SAP ECC, S/4HANA, Central Finance, Fiori, interfaces, cloud applications, and business-critical processes.

Outcreate Enterprise Quality at Scale

The following outcomes enable enterprises modernize quality engineering and improve confidence in change:

Up to 2x faster
release cycles

Lower
transformation
and go live risk

Greater business
confidence in
change programs

Lesser
regression and
testing costs

Always on,
release ready
enterprise
platforms

AI-Powered Enterprise Assurance Platform

The LTM Enterprise Assurance Platform powers Enterprise Testing Services through AI-driven accelerators, automation, and intelligent quality engineering capabilities.

Key Accelerators

- AI-IQA – AI-led Interactive Quality Assurance
- CRM-AF – Unified test automation for CRM assurance
- AI-LCNC – Enterprise testing for low-code platforms
- AI-DQA – Automation for enterprise data migration assurance
- AI-TDM – Secure, compliant, and scalable test data provisioning

Platform Outcomes

- 10× faster test creation through self-healing automation, predictive analytics, and intelligent orchestration
- Gen AI-enabled quality command center for test design, execution, and defect triage
- Real-time release readiness dashboards, defect intelligence, SLA tracking, and risk heat maps
- AI-augmented test asset factory with reusable libraries, platform templates, and test data management
- SAP and Oracle assurance suite powered by Tricentis Tosca, qTest, LiveCompare, NeoLoad, and Test Genius

Measurable Business Outcomes

50–60%
faster releases

10× faster
test creation

More than **90%**
automation coverage

Zero critical
defect leakage

Enterprise Platforms We Support

ERP Systems

SAP S/4HANA, Oracle Cloud, Microsoft Dynamics 365, and Infor.

CRM & Customer Experience

Salesforce, Microsoft Dynamics, ServiceNow, and PEGA.

Integrations

MuleSoft, Boomi, SAP CPI, Fusion, and enterprise APIs.

Data & Reporting

Data governance, migration validation, reconciliation, analytics validation, test data generation, and masking.

CMS, UX & Accessibility

AEM, Sitecore, Commerce, UI, Mobile, and WCAG compliance assurance.

iNXT Applications

Bluetooth, networking, Industry 5.0, IoT, telematics, and device assurance.

Stories of Outcreation

- Outcreating Enterprise Test Data Management: AI-Driven PII Masking & Test Data Creation Achieving 70% Reduction in Manual Effort for a Global Hospitality Leader
- Outcreating Enterprise QA Transformation: 98%+ Release Success Across 100+ Programs for a European Health Technology Leader
- Outcreating Enterprise Quality Assurance: 50% Regression Reduction for a Global Insurance & Financial Services Leader

Why LTM

As a Business Creativity partner, LTM brings the very best of human insights and intelligent systems together to help enterprises embed continuous quality across complex technology landscapes. Backed by 2,000+ platform quality engineering professionals, AI-powered accelerators, proprietary IP, and deep expertise across enterprise platforms, LTM helps organizations de-risk transformation programs, accelerate releases, and assure business outcomes with confidence.

What's Next

Assure business outcomes with AI-powered enterprise quality engineering.
